VOLUME 28 1987

SUBJECT INDEX

Abstinence, 87
  fluid diet
  morphine
  physical dependence
Acceptability, 525
  amino acid analogues
  drinking
Acetylcholine concentration, 157
  ethylcholine aziridinium
  extinction
  learning and memory impairment
Acute exposure, 147
  central nervous system
  choline uptake
  noise
Adenosine receptors, 179
  caffeine
  locomotor activity
  L-phenylisopropyladenosine
  strain differences
Age differences, 341
  lighting
  individual housing
  phencyclidine
Aggression, 503
  dose-dependent effects
  monkeys
  tryptophan
Alcohol preference, 105
  ethanol
  selective breeding
  tolerance
Alpha-2 agonists, 283
  CNS depressants
  neuroleptics
  opioid antagonists
  opioid-induced rigidity
  reversal effects
  route of administration
Amino acid analogues, 525
  acceptability
  drinking
Amino acids, 15
  barrel rotation
  bradykinin analogs
  intracerebroventricular administration
  neuropeptides
Amphetamine
  apomorphine, 393
  ascorbic acid, 381
  behavioral effects, 423
  central cholinergic mechanisms, 335
  conditioned taste aversion, 335
  cue properties, 251
  differential involvement, 335
  dopaminergic/non-dopaminergic substrates, 251
  dopamine neuronal firing, 393
  drug interaction, 335
  electrical stimulation, 251
  haloperidol, 251
  investigatory behavior, 393
  in vivo voltammetry, 381
  locomotor activity, 393, 423
  morphine, 335
  serotonin depletion, 381
  stereotypy, 423
  uric acid, 381
  ventral tegmentum, 251
d-Amphetamine, 311
  brain stimulation reward
  drug interactions
  morphine
  threshold determination
Angiotensin II, 947
  insulin-induced drinking
  plasma volume
Animal model
  antidepressant-like profiles, 321
  cerebral embolization, 243
  discrimination task, 243
  drug interaction, 321
  escape failures, 321
  GABA agonists, 321
  learned helplessness, 321
  locomotor activity, 291
  memory impairment, 243
  MPTP pretreatment, 291
  nicotine, 291
  noradrenergic receptors, 321
  Parkinson's disease, 291
  swimming-induced immobility, 321
Antidepressant-like profiles, 321
  animal models
  drug interaction
  escape failures
  GABA agonists
  learned helplessness
  noradrenergic receptors
  swimming-induced immobility
Anxiogenic effects, 29
  light/dark test
  locomotor activity
  methyl-β-carboline-3-carboxylate
  RO 15-1788
Apomorphine
  amphetamine, 393
  climbing behavior, 35
  D1 binding sites, 477
  D2 binding sites, 477
  dopamine neuronal firing, 393
  dopamine receptor sensitivity, 35
  investigatory behavior, 393
  locomotor activity, 393
  stereotypy, 477
  up-regulation, 477
Apparatus
  radial arm maze, 157
  holeboard, 75
Arecoline, 275
  autoimmunity
  dose-dependent effects
  motor responses
  nicotine
  strain differences
Ascorbic acid, 381
  amphetamine
  in vivo voltammetry
  serotonin depletion
  uric acid
Atropine, 375
  chronic administration
  dose-dependent effects
  drug interactions
  key-pecking behavior
  physostigmine
  pigeons
Autoimmunity, 275
  arecoline
  dose-dependent effects
  motor responses
  nicotine
  strain differences
Autotomy, 385
  deafferentation
  beta-endorphin concentrations
  Met-enkephalin concentrations
  strain differences

Baboons, 389
  cocaine substitution procedure
  intravenous self-administration
  phenylpropanolamine
Barbiturates, 75
  benzodiazepine receptor agonist
  drug interaction
  exploratory activity
Barrel rotation, 15
  amino acids
  bradykinin analogs
  intracerebroventricular administration
  neuropeptides
Basal gastric acid secretion, 419
  gastric ulcers
  histidine carboxylase
  intraluminal pH levels
Behavioral analyses, 43
  drug interaction
  ethylketocyclazocine
  locomotor activity
  naloxone
Behavioral development, 411
  developmental toxicity
  perinatal phencyclidine
  prenatal phencyclidine
Behavioral effects
  amphetamine, 423
  dose-dependent effects, 153
  drug comparisons, 153
  N-ethyl-3,4-methylenedioxy-amphetamine, 153
  locomotor activity, 423
  stereotypy, 423
Behavioral hyperactivity, 469
  cerebral glucose metabolism
  choline supplementation
  chronic administration
  pentobarbital
Behavioral tolerance, 111
  chronic ethanol tolerance
  free-choice consumption
  selective breeding
Benzodiazepine receptor agonist, 75
  barbiturates

drug interaction
exploratory activity
Benzodiazepine receptor binding, 521
GABA
in vivo
Tyr-MIF-1
Benzodiazepine receptors, 21
brain stimulation, electrical
medial hypothalamus
Benzodiazepines
β-carbolines, 427
eating, 427
5-HT_{1A} agonists, 187
hypertonic saline consumption, 187
palatability, 427
rehydration, 187
Beta-adrenoceptors, 171
cardiovascular effects
chronic treatment
delta-9-tetrahydrocannabinol
Bradykinin analogs, 15
amino acids
barrel rotation
intracerebroventricular administration
neuropeptides
Brain
amygdala, 291
bicuculline, 21
caudate, 381, 423
dorsal hippocampus, 327
dorsal raphe nuclei, 327
frontal cortex, 147
globus pallidus, 381
hippocampus 147, 157, 465
hypothalamus, 147
lateral habenular nuclei, 327
lateral hypothalamus, 197, 511
medial amygdala, 101
median raphe nuclei, 327
midbrain central gray, 21
neostriatum, 453
nucleus accumbens, 423
olfactory tubercle, 291
prefrontal cortex, 327
striatum 35, 147, 291
substantia nigra pars reticulata, 453
ventral tegmentum, 251, 261
Brain stimulation, electrical, 21
benzodiazepine receptors
medial hypothalamus
Brain stimulation reward, 311
d-amphetamine
drug interactions
morphine
threshold determination

Caffeine, 179
adenosine receptors
locomotor activity
L-phenylisopropyladenosine
strain differences
Capsaicin, 65
route of administration
substance P release
thermoregulation
Tween 80
β-Carbolines, 427
benzodiazepines
eating
palatability
Cardiovascular effects, 171
beta-adrenoceptors
chronic treatment
delta-9-tetrahydrocannabinol
Cardiovascular responses, 459
cocaine
drug interaction
human studies, males
marijuana
Catalepsy, 453
GABA mechanism
muscle rigidity
substantia nigra pars reticulata
Central cholinergic mechanisms, 335
amphetamine
conditioned taste aversion
differential involvement
drug interaction
morphine
Central mechanism, 401
chronic administration
cocaine
discriminative stimulus properties
tolerance
Central nervous system, 147
acute exposure
choline uptake
noise
Cerebral embolization, 243
animal model for dementia
discrimination task
memory impairment
Cerebral glucose metabolism, 469
behavioral hyperactivity
choline supplementation
chronic administration
pentobarbital
Choline supplementation, 469
behavioral hyperactivity
cerebral glucose metabolism
chronic administration
pentobarbital
Choline uptake, 147
acute exposure
central nervous system
noise
Chronic administration
atropine, 375
behavioral hyperactivity, 469
central mechanism, 401
cerebral glucose metabolism, 469
choline supplementation, 469
cocaine, 401
discriminative stimulus properties, 401
dose-dependent effects, 375
drug interactions, 375
key-pecking behavior, 375
pentobarbital, 469
physostigmine, 375
pigeons, 375
tolerance, 401
Chronic ethanol tolerance, 111
behavioral tolerance
free-choice consumption
selective breeding
Chronic excessive intake, 517
cocaine
oral self-administration
schedule induction
Chronic treatment, 171
beta-adrenoceptors
cardiovascular effects
delta-9-tetrahydrocannabinol
Cigarette smoking, 305
human studies
nicotine intake
tobacco smoke refining
Classical conditioning, 7
nitrous oxide
skin conductance
Climbing behavior, 35
apomorphine
dopamine receptor sensitivity
CNS depressants, 283
alpha-2-agonists
neuroleptics
opioid antagonists
opioid-induced rigidity
reversal effects
route of administration
Cocaine
cardiovascular responses, 459
central mechanism, 401
chronic administration, 401
chronic excessive intake, 517
discriminative stimulus properties, 401
drug interaction, 459
human studies, male, 459
injection speed, 407
marijuana, 459
minimum reinforcing dose, 407
monkeys, crab-eating, 407
oral self-administration, 517
pentobarbital, 407
schedule induction, 517
self-administration, 407
tolerance, 401
Cocaine substitution procedure, 389
baboons
intravenous self-administration
phenylpropanolamine
Cognitive behavior, 213
human studies
methylphenidate
problem solving
Conditioned place preference
drug interaction, 267
lateral hypothalamus, 511
locomotor activity, 267
morphine, 267
naltrexone, 267
reinforcement, 511
substance P, 511
Conditioned taste aversion
amphetamine, 335
central cholinergic mechanisms, 335
differential involvement, 335
drug interaction, 219, 335
morphine, 219, 335
nicotine, 495
opiate antagonist, 219
opiate receptors, 219
place conditioning, 219
route of administration, 495
saccharin, 495
Cue properties
amphetamine, 251
differential effects, 261
discrimination, 261
dopaminergic/non-dopaminergic substrates, 251
electrical stimulation, 251, 261
haloperidol, 251
physostigmine, 261
ventral tegmentum, 251, 261

D1 binding sites, 477
apomorphine
D2 binding sites
stereotypy
up-regulation
D2 binding sites, 477
apomorphine
D1 binding sites
stereotypy
up-regulation
Deafferentation, 385
autotomy
beta-endorphin concentrations
Met-enkephalin concentrations
strain differences
Delayed onset, 203
escape behavior
haloperidol
learning
Depressive behavior, 367
desipramine
neonatal exposure
zimeldine
Desipramine, 367
depressive behavior
neonatal exposure
zimeldine
Developmental toxicity, 411
behavioral development
perinatal phencyclidine
prenatal phencyclidine
Diazepam
extinction, 81
free recall, 347
human studies, 347
memory, explicit, 347
memory, implicit, 347
monkeys, 81
neurological impairment, 347
self-administration, 81
spared memory function, 347
word completion, 347
Differential effects, 261
cue properties
discrimination
electrical stimulation
physostigmine
ventral tegmentum
Differential involvement, 335
amphetamine
central cholinergic mechanisms
conditioned taste aversion
drug interaction
morphine
Diisopropylphosphofluoridate, 317
genetic variation
inbred mice
paraoxonase activity
2,5-Dimethoxy-4-methylamphetamine, 327
dose-dependent effects
hallucinogens
intracranial administration
operant behavior
Discrimination, 261
cue properties
differential effects
electrical stimulation
physostigmine
ventral tegmentum
Discrimination task, 243
animal model for dementia
cerebral embolism
memory impairment
Discriminative stimulus properties, 401
central mechanism
chronic administration
cocaine
tolerance
Dopamine neuronal firing, 393
amphetamine
apomorphine
investigatory behavior
locomotor activity
Dopamine receptor sensitivity, 35
apomorphine, 35
climbing behavior, 35
hypothyroidism, 193
post-synaptic changes, 193
Dopaminergic/non-dopaminergic substrates, 251
amphetamine
cue properties
electrical stimulation
haloperidol
ventral tegmentum
Dose-dependent effects
aggression, 503
arecoline, 275
atropine, 375
autoimmunity, 275
behavioral effects, 153
chronic administration, 375
2,5-dimethoxy-4-methylamphetamine, 327
drug comparisons, 153
drug interactions, 375
N-ethyl-3,4-methylenedioxyamphetamine, 153
hallucinogens, 327
intracranial administration, 327
key-pecking behavior, 375
mephenytoin, 483
methsuximide, 483
monkeys, 503
motor responses, 275
nicotine, 275
operant behavior, 327
physostigmine, 375
pigeons, 375, 483
repeated acquisition, 483
strain differences, 275
tryptophan, 503
Drinking
acceptability, 525
amino acid analogues, 525
ethanol, 437
NaCl intake, 209
repeated administration, 209
reserpine, 209
social structure, 437
stress, 437
tolerance, 209
Drug
amphetamine 219, 251, 335, 381, 393, 423
d-amphetamine, 311
anti-dynorphin B antiserum, 465
apomorphine 35, 393, 477
arecoline, 275, 433
atropine, 15, 335, 375, 433
